## Education

---

### Stevens Institute of Technology

B.S./M.S., Computer Science

Sept. '17 - May '21

GPA: 3.92

Honors: Edward A. Stevens Scholarship, Dean's List,

Member of the International Computer Science Honor Society

Courses: Algorithms, Data Structures, Machine Learning (Coursera)

## Experience

---

### Full Stack Software Developer Intern - IBM

Jun '19 - Aug '19

Gradle, Python, Java

- Add resilience features which reduce build pipeline failures by 4%
- Aid in open sourcing 20 packages of Open Liberty
- Add automation tools by writing Python/Gradle scripts to reduce developer conversion time by 17%

### Course Assistant (Discrete Structures/Algorithms) - Stevens Institute of Technology

Jan '19 - Dec '19

Scheme, C++

- Provide aid in grading over 200 students' assignments
- Hold office hours where I help students with both theoretical and programming problems
- Run lab sections where I teach problem solving methods and programming concepts

## Programming Projects

---

### DABNet (Personal Project)

Jun '19 - Present

PyTorch, OpenCV, Python, NumPy

- Developing a computer vision and reinforcement learning application to teach a computer how to play Dota Underlords
- Use **OpenCV** for image processing and **PyTorch** to build convolutional neural networks for image classification and object detection
- Utilize deep reinforcement learning algorithms to optimize a neural network based on the classified input parameters implemented in **PyTorch**

### Cryptocurrency Predictor (Personal Project)

Feb '18 - Jun '18

BeautifulSoup4, Tensorflow, Python

- Created a machine learning pipeline to predict cryptocurrency prices based on information on coinmarketcap
- Created a neural network which has a .002 mean squared cross validation error on the Loki cryptocurrency

### We Are The Last Words (Personal Project)

Feb '18 - Jun '18

Django, Python, SQLite3, HTML, CSS, JavaScript, Bootstrap

- Developed the back end and front end of an active blogging web application that has an average monthly view count of 12,000

## Programming Skills

---

**Experienced With:** Python, Linux, HTML, CSS, JavaScript **Familiar with** C++, Java, SQL

**Machine Learning:** NumPy, PyTorch, Tensorflow, Keras, SciKit-Learn

**Full Stack Web Development:** Flask, Django, Vue.js, Express

**DevOps Technologies:** Docker, Kubernetes, Gradle, Ant

**Database Technologies:** PostgreSQL, MongoDB, SQLite3

## Awards

---

**Won Best Usage of Twilio API at HackTCNJ 2018** - For the project titled Panic Button

**STEM project 1st place in Rutgers Junior Science and Humanities Symposium**- For the project of building a construction robot
